

CRM App Plan & Cost Estimate

Sep 26, 2026 · @aman

App name: Sky Properties · **Prepared for:** Sky Properties

A CRM for a property sales team: executives call customers from an Android app, every call is recorded, every ad lead comes in automatically, and admins see everything in a separate web app. **Estimated running cost: about ₹16,83,300 a year before GST (about ₹19,86,300 with GST), based on Tata's written quote for 100 users.**

Requirements

The CRM must cover calls, leads, users, tracking and long-term use.

Calls

- Executives call customers from their own mobile phones.
- Every call is recorded in full, including calls longer than 30 minutes.
- At least 50 calls can run at the same time, with no daily call limit.
- The bill should not go up when executives talk more.

Leads

- Leads from the client's ads come in automatically: Facebook, Instagram, Google, YouTube, property portals (99acres, MagicBricks, Housing.com) and the client's website.
- Each new lead goes to the next executive, one by one.

Users and apps

- Executives use an Android app to call customers. Customers never use the CRM.
- Admins use a separate web app in the browser, on a laptop or phone, to see recordings, locations and what each executive is doing. The mobile app has no admin screens.
- Admins and executives get separate IDs and passwords. An executive login doesn't work in the web app, and an admin login doesn't work in the mobile app.
- The executive app is installed directly, not from the Play Store.

Tracking and records

- Track executives' location during work hours and show it to admins on a live map.

- Show each customer's approximate area from their phone number.
- Keep properties, call history and follow-ups in one place.

Long term

- The CRM is for lifetime use, on paid plans only.
- Start with 50 executives and grow to 500.

How we meet each requirement

Five services do the main work: **Tata Smartflo** for calls, **Supabase** for data and server code, **Cloudflare** to host the admin web app, **Firebase** for phone alerts and **Google Maps** for the map. The executive app is built in **Kotlin**, the admin web app and server code in **TypeScript** (the web app uses React), and the database uses **SQL**.

Requirement	How we do it	Service used
Call from the executive's mobile	Executive taps Call in the app. Tata rings the executive first, then the customer.	Tata Smartflo Click2Call
Record every call, any length	Tata records the whole call. After the call, a copy is saved in our own storage.	Tata + Supabase Storage
50 calls at once, no call limit	100 Tata users with unlimited calls (Tata's minimum). Tata already runs 50 calls at once for another company.	Tata Smartflo
Bill does not grow with talk time	Fixed ₹1,350 per user per month, however long executives talk.	Tata Smartflo
Leads from Facebook and Instagram	Meta sends each form lead to our system automatically.	Meta Lead Ads + Supabase
Leads from Google and YouTube	Google's lead form sends each lead to our link.	Google Ads lead forms + Supabase
Leads from property portals	We use each portal's CRM connection. If a portal has none, we read its lead emails.	Portals + Supabase

Requirement	How we do it	Service used
Leads from the website	The website form sends details to our link.	Supabase
Leads given one by one	The system picks the next executive and sends a phone alert.	Supabase + Firebase
Separate apps and logins	Executives log in on the Android app. Admins log in on the web app and also enter a 6-digit code. Each app refuses the other role's login, and the database itself blocks executives from admin data.	Kotlin app + React web app + Supabase logins
Admin features	In the web app: dashboard, all leads, all calls and recordings, live map, location history, each executive's day (check-in, calls, talk time), reports with Excel download, manage team.	Admin web app + Supabase
Admin web app opens anywhere	Runs in any browser on the client's own web address. Updates go live without installing anything.	Cloudflare + domain name
Executive location	While checked in, the phone sends its location. Admins see it move live on the web app's map.	Kotlin app + Supabase + Google Maps
Customer's area	Approximate state found from the phone number series.	Supabase
Properties, history, follow-ups	Saved in the database. Executives get follow-up reminders.	Supabase + Firebase
Install without Play Store	Download link for the first install of the executive app. The app updates itself after that.	Supabase Storage

Requirement	How we do it	Service used
Lifetime use	All accounts in the client's company name, daily backups, data stored in India (Mumbai).	All services

Platforms, plans and our choice

For every platform we picked a paid plan that covers our needs without paying for extras. US-dollar prices are converted at ₹88 per \$ in the cost section.

Tata Smartflo (calls and recording)

Plan	Price per user, per month	What you get
Cloudphone 500	₹500	400 free minutes, then ₹0.50 per minute. Call recording, dashboard
Cloudphone 700	₹700	600 free minutes, then ₹0.30 per minute. Adds CRM connection, phone menu, auto-dialer
Cloudphone 850	₹850	Unlimited minutes. Price from a public listing; not part of Tata's quote to us
Smartflo Lite	₹950 per licence (3-month minimum, ₹5,000 one-time)	Shown on Tata's own website
Smart Pro (our choice)	₹1,350	Unlimited calls and 3 business numbers per user. Tata's written quote to us, minimum 100 users

Why Smart Pro: it's the plan Tata quoted to us in writing on 26 Sep 2026, and the bill doesn't go up with talk time (Tata to confirm there's no fair-use limit). Each executive talks about 2,600 minutes a month (100 minutes × 26 days). At that level, Cloudphone 500 would cost about ₹1,600 per user and Cloudphone 700 about ₹1,300, and both rise when executives talk more. Tata should also confirm whether the cheaper Cloudphone 850 can work for us (see Tata's quote below).

Supabase (database, logins, file storage, server code)

Plan	Price per month	What you get
Free	\$0	500 MB database, 1 GB files. Pauses after 1 week without use
Pro (our choice)	\$25 , plus \$10 for a separate test project	8 GB database, 100 GB files, 250 GB downloads, daily backups kept 7 days, never pauses
Team	\$599	Pro plus security certificates (SOC 2, ISO 27001) for large companies
Enterprise	Custom	Custom contract

Why Pro: it has everything we need. Team only adds certificates, and Free is too small and pauses. Extra use on Pro: files \$0.0213 per GB above 100 GB, downloads \$0.09 per GB above 250 GB.

Cloudflare (hosting for the admin web app)

Plan	Price per month	What you get
Free	\$0	1,00,000 requests a day
Workers Paid (our choice)	\$5	10 million requests a month. Web app files are served free, with no limit
Enterprise	Custom	For large companies

Why Workers Paid: it's a paid plan, as agreed for lifetime use, and far more than an admin team needs. The web app uses the client's own web address (domain name), which costs about ₹1,000 a year depending on the name.

Firebase by Google (phone alerts, crash reports)

Plan	Price	What you get
Spark	No cost	Basic plan with limits

Plan	Price	What you get
Blaze (our choice)	Pay only for what you use	Phone alerts and crash reports cost ₹0 on this plan too

Why Blaze: it's the paid plan, as agreed for lifetime use, and our two features still cost nothing.

Google Maps Platform (maps)

Map	Price	What you get
Maps SDK for Android (executive app)	₹0	Unlimited map use inside the Android app
Maps JavaScript API (admin web app)	10,000 map loads a month free, then \$7 per 1,000	The live map admins open in the web app

Why: admins watch executives on the web app's map. Even 100 map opens a day is about 3,000 a month, well inside the free 10,000. Expected cost is ₹0.

GitHub (safe storage for both apps' code)

Plan	Price per user, per month	What you get
Free	\$0	Basic private code storage
Team (our choice)	\$4 for the first 12 months (later price not published)	Protected code, 3,000 build minutes a month, support
Enterprise	\$21	Controls for large companies

Why Team: a paid plan that's enough for 3 people (our team and the client). Cloudflare publishes the admin web app straight from GitHub whenever the code changes.

Android Developer Console (optional, executive app only)

Option	Price	What you get
Limited distribution	Free	Up to 20 phones only

Option	Price	What you get
Full distribution (optional)	\$25	Any number of phones. Needs a free D-U-N-S company number (takes up to 28 days)

Why: Google's new rule for apps installed outside the Play Store reaches India in 2027. Without this account, each phone needs a one-time setup with a 1-day wait before it can install the app.

Lead sources

Meta (Facebook, Instagram) and Google lead forms cost ₹0 to connect. The client only pays for the ads they run and their existing property portal plans.

Why we chose these vendors

Tata Smartflo is the only calling service we found with a fixed fee per user and unlimited minutes, so the bill stays the same however long executives talk.

Calling services compared

Service	How the bill works	Yearly cost	Decision
Tata Smartflo	Fixed ₹1,350 per user a month, unlimited minutes, minimum 100 users	₹16,20,000 (100 users)	Chosen. Runs on Tata's own network; 50 calls at once shown in a Tata case study; covers up to 100 executives
Airtel IQ	Pay per minute	Quote needed (price not public)	Reliable, but the bill grows with talk time
Knowlarity	₹1,499 per executive per month, 1-year contract	~₹8,99,400 + call charges	Grows with every executive, plus call charges
Exotel	Prepaid credits, about ₹0.60–1.50 per minute	~₹9.4–23.4 lakh	Rejected by the client: bill grows with every minute

Service	How the bill works	Yearly cost	Decision
Ozonetel	About ₹0.70 per minute (to confirm)	~₹10,92,000	Bill grows with talk time
Servetel (now Acefone)	Monthly plan per user, from ₹1,500	Quote needed	Made for small teams
MyOperator	From ₹2,500 a month for 3 users	Quote needed	Linking to our CRM needs a costlier plan

Other services are priced for 50 executives and about 1,30,000 call minutes a month; per-minute services may also charge for both sides of each call. At 50 executives Tata costs more than the lowest per-minute prices, because it bills at least 100 users. Beyond about 90 executives it is cheaper than every other company priced here, and its bill never grows with talk time.

Why Supabase instead of our own server

- One service gives the database, logins, file storage, server code and scheduled jobs. There's no server to set up or repair.
- Data stays in India, in a Mumbai data centre.
- Supabase handles daily backups and security updates.
- It uses a standard database (PostgreSQL), so the CRM can move to another host later if ever needed.
- About ₹44,300 in year 1. The spending cap stays off so recordings never stop saving, and billing alerts warn us if the bill rises.

Why Cloudflare, Firebase, Google Maps and GitHub

- **Cloudflare:** hosts the admin web app on a fast worldwide network for \$5 a month. There's no server to set up or repair.
- **Firebase:** Google's standard way to send alerts to Android phones. No charge for our use.
- **Google Maps:** maps most people already know. The web app's map stays within Google's free 10,000 loads a month.
- **GitHub:** keeps every version of both apps' code safe, in the client's account.

Tata's quote and how it fits our plan

Tata's written quote of 26 Sep 2026 is the Smart Pro unlimited plan: ₹1,350 per user a month for at least 100 users, paid every 3 months in advance. It gives the fixed bill we need, but it doesn't yet mention recording, calls at once or the link to our app. Its 100-user minimum also means paying for 50 unused users while the team has 50 executives.

Quote details

Item	Tata's quote (before GST unless marked)
Plan	Smart Pro, unlimited
Price per user	₹1,350 a month
Minimum users	100
Business numbers	300 (3 per user)
Monthly rental	₹1,35,000
Billing	Every 3 months, in advance (₹4,05,000)
One-time charge	₹10,000
Lock-in	12 months
Extra number	₹50 per number
Extra Tata admin login	₹200 per admin a month
GST	18% on the whole bill
First payment (3 months + one-time charge + GST)	₹4,89,700

After the first payment, Tata bills ₹4,77,900 (with GST) every 3 months. Tata's total for year 1 is ₹19,23,400 with GST, including the one-time charge.

Does the quote fit our plan?

Our need	What the quote says	Fits?
Bill must not grow with talk time	Unlimited calls at a fixed ₹1,350 per user	Yes
Admins have their own login	Admins use our web app, so extra Tata admin logins (₹200 a month each) aren't needed	Yes
Lifetime use on a paid plan	12-month lock-in, paid every 3 months; price after 12 months to confirm	Yes
At least 50 calls at the same time	100 users, but the number of calls at once isn't written	To confirm
Every call recorded, any length	Recording isn't written in the quote	To confirm
Our app starts calls and receives recordings	Calling from our app, and call details and recordings sent to our system, aren't written in the quote	To confirm
Calls come from business numbers that don't show as spam	3 business numbers per user (300 in all); spam protection isn't written	To confirm
Grow to 500 executives	Price for extra users isn't written	To confirm
Start with 50 executives	Minimum 100 users: ₹67,500 a month for 50 unused users	No

To confirm with Tata before signing

1. Can we start with 50 users and add users later at ₹1,350? This alone saves ₹8,10,000 a year before GST.
2. Is every call recorded with no length limit, how long do you keep recordings, and can our system download them?
3. Are calling from our app (Click2Call) and automatic sending of call details and recording links (webhook) included at no extra cost?
4. Can all users be on calls at the same time, and does one call from our app count as 1 line or 2?

5. Is there a fair-use limit on "unlimited"?
6. Will ₹1,350 stay the same after the 12-month lock-in, and for users up to 500?
7. Is the ₹50 for an extra number charged monthly or once?
8. Can we get Cloudphone 850 (₹850, unlimited) with the same features instead?
9. Do the numbers follow TRAI rules for business calls, and how do you stop them showing as spam on Truecaller?

Cost estimate

The CRM costs about **₹16,83,300 a year before GST** (about ₹19,86,300 with 18% GST), plus about ₹12,200 one-time before GST. About 96% of it is Tata's 100 users. That's about ₹2,806 per executive a month with 50 executives, or about ₹1,411 with 100, before GST.

Yearly cost (year 1)

Item	Plan	Per year
Tata Smartflo	Smart Pro, 100 users × ₹1,350 × 12 months	₹16,20,000
Supabase	Pro + test project + recording storage	₹44,300
GitHub	Team, 3 users	₹12,700
Cloudflare	Workers Paid (admin web app)	₹5,300
Domain name	Web address for the admin web app	~₹1,000
Firebase	Blaze	₹0
Google Maps	Pay as you use	₹0
Total before GST		₹16,83,300
Total with 18% GST		₹19,86,300

One-time cost

Item	Cost
Tata one-time charge (from Tata's quote)	₹10,000

Item	Cost
Android Developer Console (optional)	~₹2,200 (\$25)
Total	~₹12,200

Our development and maintenance charges are quoted separately.

5-year view (recordings kept forever)

Year	Tata	Supabase	Others (GitHub, Cloudflare, domain)	Total before GST
1	₹16,20,000	₹44,300	₹19,000	₹16,83,300
2	₹16,20,000	₹61,800	₹19,000	₹17,00,800
3	₹16,20,000	₹79,300	₹19,000	₹17,18,300
4	₹16,20,000	₹96,800	₹19,000	₹17,35,800
5	₹16,20,000	₹1,14,400	₹19,000	₹17,53,400
5 years	₹81,00,000	₹3,96,600	₹95,000	₹85,91,600

Supabase rises each year because recordings add about 65 GB every month. Tata's price is assumed to stay the same after the 12-month lock-in, and GitHub at today's price.

Options that change the cost

- **If Tata agrees to start at 50 users:** Tata drops to ₹8,10,000 a year, saving ₹8,10,000 before GST.
- **Keep recordings for 1 year only:** Supabase stays at about ₹52,300 a year from year 2. The 5-year total drops to about ₹84,48,500, saving ₹1,43,100.
- **If all 100 users make calls:** recordings double to about 130 GB a month, so Supabase is about ₹53,700 in year 1 (₹9,400 more).
- **Each extra Tata user above 100:** add ₹16,200 a year before GST, if Tata keeps ₹1,350 per user (to confirm).

- **At 500 executives:** Tata would be ₹81,00,000 a year at today's price, so ask Tata for a lower price per user at that size. Supabase rises to about ₹1.35–1.8 lakh in the first year because of more recordings and a bigger database.

Assumptions

- 50 executives to start, about 100 minutes of calls each per working day, 26 working days a month (about 1,30,000 minutes a month). Tata still bills 100 users.
- Recordings take about 0.5 MB per minute (about 65 GB a month).
- ₹88 per US dollar. Supabase, GitHub, Cloudflare and the Android fee are billed in dollars, so the rupee cost can change.
- Tata prices are from Tata's written quote of 26 Sep 2026. Other prices are from each vendor's public pages in September 2026.
- GitHub hasn't published its price after the first 12 months. The domain price depends on the name chosen.

Flowchart 1: for the technical team

The CRM has two apps: a Kotlin Android app for executives and a React web app for admins. Both run on Supabase (TypeScript server code and an SQL database), with Tata, Meta, Google, Firebase and Cloudflare as outside services. The chart goes from the tech stack and login to every feature.

CRM · TECHNICAL FLOW

How the CRM is built and how every feature works

For the technical team · Android app for executives, web app for admins · No own server

- Executive app (Kotlin)
- Admin web app (React)
- Supabase backend (Mumbai)
- Outside service
- Check / decision

1 Tech stack · Why these languages

EXECUTIVE APP

Kotlin

Native Android app for executives. Best for calls, background location and phone alerts.

ADMIN WEB APP

React + TypeScript

Opens in any browser. Hosted on Cloudflare at the client's own web address.

SUPABASE

TypeScript (Edge Functions)

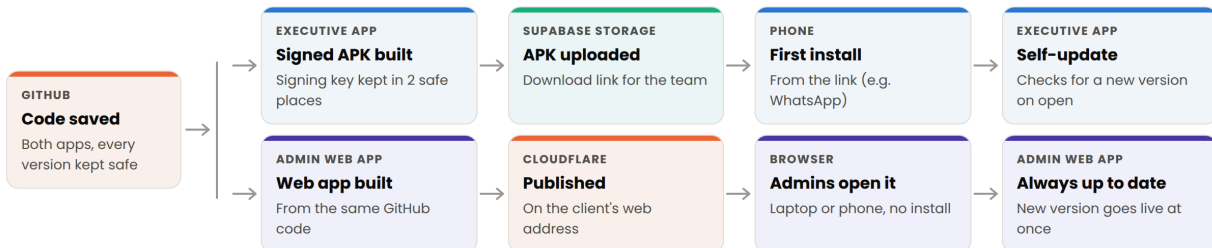

Server code that talks to Tata, Meta and Google. Secret keys never leave the server.

SUPABASE

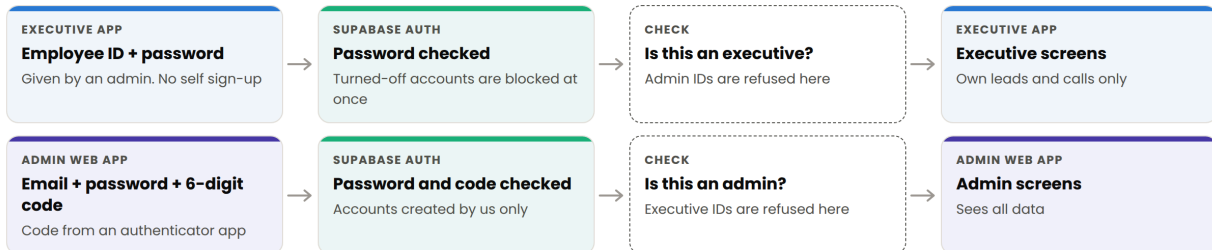

SQL · PostgreSQL

Users, leads, calls, follow-ups, properties, locations. Security rules on every table.

2 Build and publish · No Play Store, nothing to install for admins

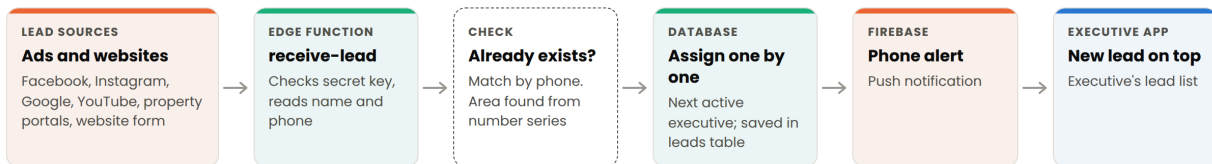

3 Login and roles · Two apps, separate IDs and passwords

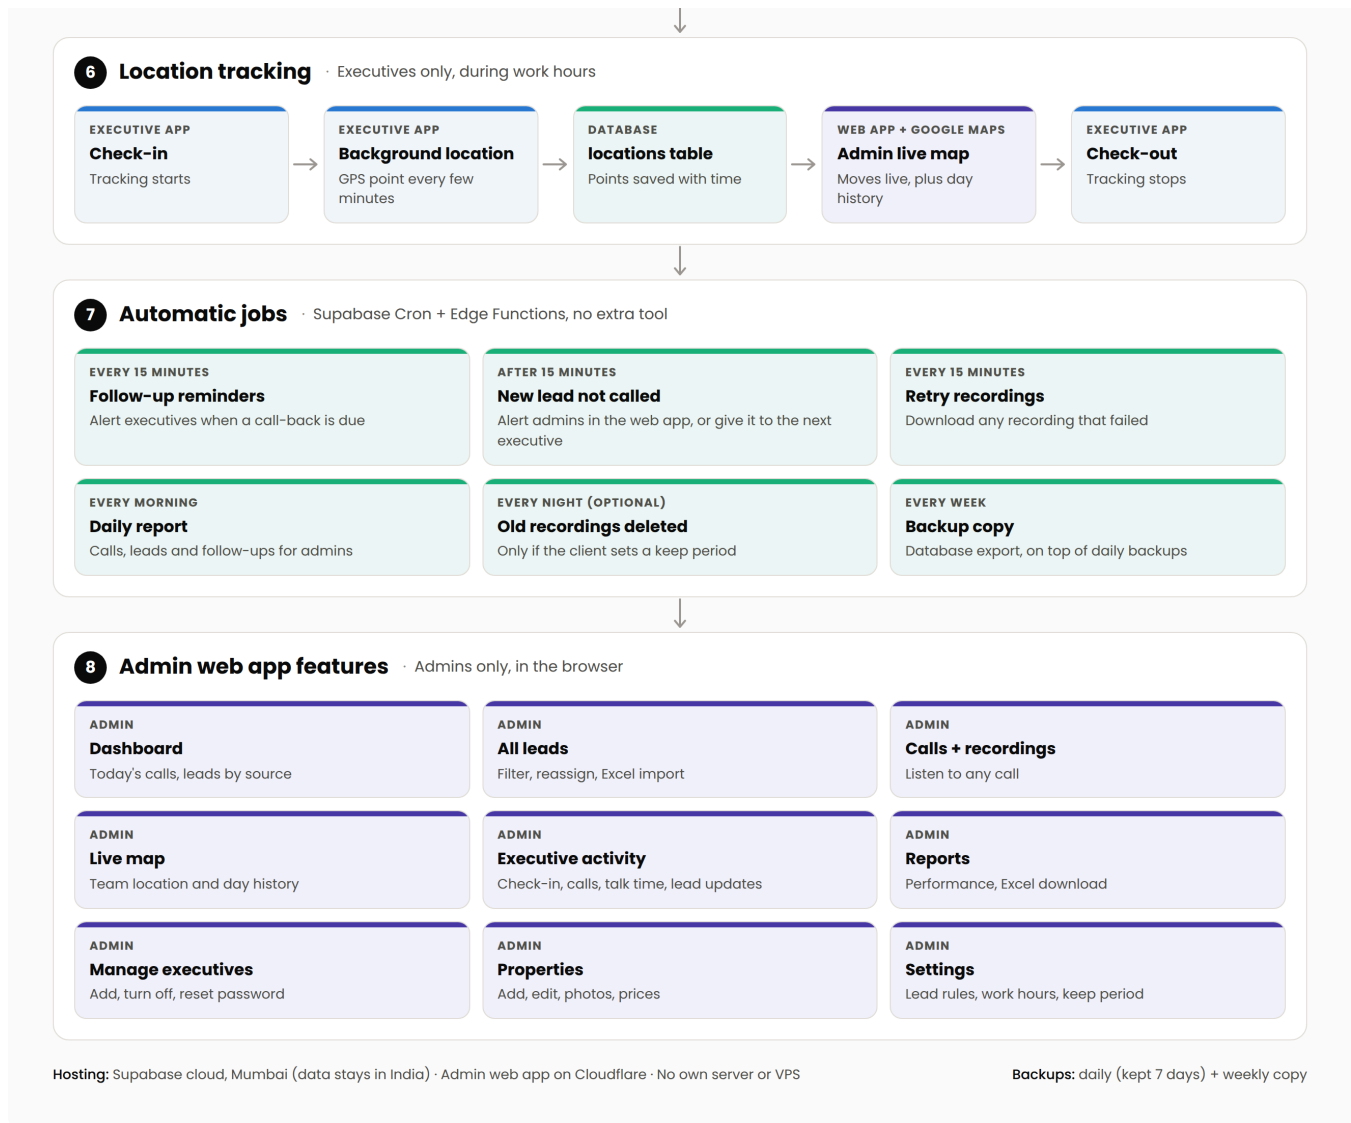

Row Level Security: the database itself returns only an executive's own rows, even if the app is tampered with.

4 Leads come in · Fully automatic

5 Call and recording · Every call recorded, any length

Flowchart 2: for everyone

In simple words: a customer fills an ad form, the CRM gives the lead to an executive, the executive calls from the app, the call is recorded, and the admin sees everything in the web app.

CRM · SIMPLE FLOW

How the CRM works, in 9 simple steps

For everyone. No technical knowledge needed.

1 The customer shows interest

STEP 1

Customer fills a form in an ad

On Facebook, Instagram, Google, YouTube, a property website or the client's own website.

Customer

STEP 2

The lead comes into the CRM by itself

Name and phone number are saved. Nobody has to type anything.

Automatic

2 The executive calls

STEP 3

The next executive gets the lead

Leads are shared one by one, and the executive's phone gets an alert.

Automatic

STEP 4

The executive taps "Call" in the app

No need to dial. The customer's number can be kept hidden.

Executive

STEP 5

Both phones ring and they talk

The executive's phone rings first, then the customer's. It feels like a normal call.

Executive + customer

STEP 6

The whole call is recorded

Every call, even ones longer than 30 minutes.

Automatic

3 Follow-up and control

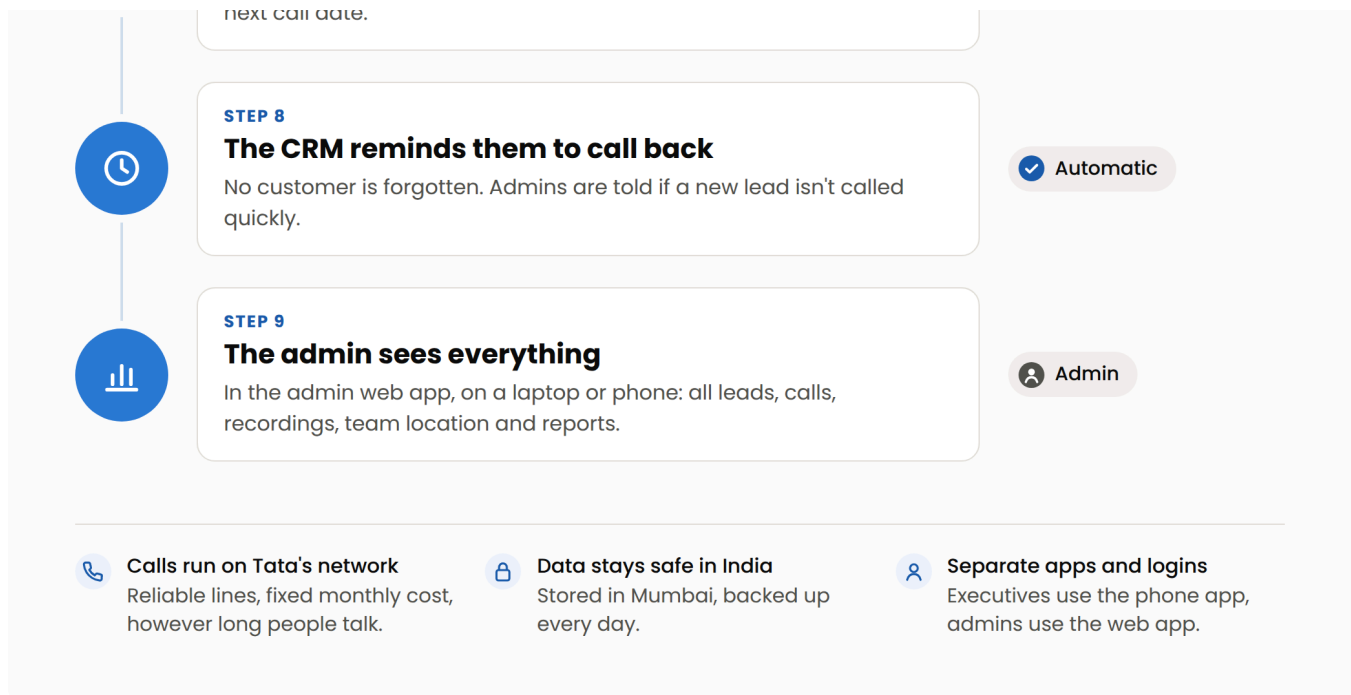

STEP 7

Recording saved, result noted

The executive picks the result, such as interested or site visit, and the next call starts.

Executive
